[Company Name]

[Company Address]

Dear [Hiring Manager's Name],

I'm a Computer Science student at Beirut Arab University (graduating June 2027) writing to apply for the [Position Title] role at [Company Name]. Most of what I build starts the same way: something is manual, repetitive, or fragile, and I want to see if I can make it not be — and I'd like to bring that habit to your team.

That habit has shown up in a few different projects. I built Tasky, an AI-enhanced planner that turns high-level goals into structured subtasks, using a layered Flutter app on the frontend and a Node.js/Express backend that integrates OpenAI with schema validation and fallback handling for reliability. I built Prompty, a Laravel + Vue 3 platform that converts images into reusable prompts via OpenAI's vision models, deployed across Laravel Cloud and Vercel. And I built MediCare Hub, a role-based healthcare platform in PHP and MySQL handling appointment scheduling and clinical workflows across patients, doctors, and admins.

Outside of personal projects, I spent two summers as an IT Support & Systems Assistant at CCIB Lebanon, troubleshooting hardware, network, and software issues across distributed branches, and cleaning up inconsistent SQL data where downtime wasn't an option. That work taught me to care about reliability in a way that's carried into everything I've built since.

I'd welcome the chance to talk about how I can contribute to [Company Name]. Thank you for your time and consideration.

Sincerely,
Nizar Ramadan
