## Education

Bachelor of Science in Computer Science

Beirut Arab University — Beirut, Lebanon

Expected Graduation: June 2027

GPA: 3.11 / 4.0

Relevant Coursework: Data Structures, Database Systems, Object-Oriented Programming, Discrete Mathematics, Web Development

## Experience

### **IT Support & Systems Assistant — CCIB Lebanon**

June 2025 — Aug 2025 & December 2025 — Jan 2026

- Diagnosed and resolved hardware, software, and network issues across multiple distributed branches
- Configured and maintained network connectivity (IP allocation, firewall rules, system integration)
- Assisted in maintaining network infrastructure across geographically distributed offices
- Performed SQL-based data operations, including querying, updating, and cleaning inconsistent records
- Supported internal tools built with VB and .NET through debugging and system updates
- Participated in IT asset auditing and system maintenance operations

## Projects

### **Tasky — AI-Enhanced Smart Planner Mobile App (Flutter+Node.js)**

Built a cross-platform, local-first productivity application that combines structured task management with AI-assisted planning.

- Architected a layered Flutter application using Riverpod and a repository pattern over Hive for offline-first persistence
- Designed and implemented an AI planning pipeline that converts high-level goals into structured, date-bound subtasks
- Built a resilient backend service (Node.js + Express) integrating OpenAI with schema validation, retries, and fallback generation
- Implemented soft-delete lifecycle with undo support and retention cleanup for improved data safety
- Developed advanced task management features including filtering, grouping (Today/Overdue/Upcoming), and bulk operations
- Ensured system reliability through defensive parsing, normalization, and failure handling across AI responses

### **Prompty — Image-to-Prompt Generation Platform (Laravel + Vue)**

Developed a full-stack AI-powered web application that converts uploaded images into reusable text prompts using OpenAI vision models.

- Designed and implemented a versioned REST API (Laravel) with token-based authentication (Sanctum) and robust request validation
- Built an image ingestion pipeline with validation, storage, and metadata persistence for reliable processing
- Architected a dedicated service layer for AI integration, handling image encoding, prompt generation, and failure scenarios
- Developed a Vue 3 SPA with protected routing, upload/preview workflows, and searchable prompt history
- Deployed a distributed full-stack system using Laravel Cloud (backend) and Vercel (frontend), ensuring scalable and reliable delivery

## MediCare Hub — Multi-Role Healthcare Workflow Platform (PHP + MySQL)

Built a full-stack web platform supporting patient, doctor, and admin workflows for appointment scheduling and clinical operations.

- Designed and implemented role-based authentication and session management for multiple user types
- Developed a complete appointment booking system with dynamic slot generation and database-level conflict prevention
- Built doctor-facing workflows for managing appointments, notes, prescriptions, and test reports
- Designed relational database schema with foreign keys and integrity constraints for clinical data consistency

## Skills

**Languages:** JavaScript, PHP, C#, Java, C++, Dart, SQL

**Backend:** Laravel, Node.js (Express), REST APIs

**Databases:** MySQL, SQL Server, SQLite

**Frontend:** HTML, CSS, Angular, Vue, Next.js

**Mobile:** Flutter (Riverpod, Hive, Clean Architecture)

**Tools:** Git, GitHub, Postman

**Concepts:** OOP, MVC, Clean Architecture, API Design, Database

**Other:** Debugging, system troubleshooting, basic networking
